

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An apparatus comprising:

a call handler configured to identify a media type of a call; ~~and~~

a media interface, coupled to the call handler, configured to present at least one call feature selection associate with the media call type, configured to determine whether the call feature selection requires additional information, and configured to prompt the subscriber for the additional information when required by the call feature selection;

a call processor configured to facilitate audio or video calls through the media interface;

a conference call manager configured to facilitate calls to multiple parties;

a voice mail database configured to store call messages;

a voice mail manager, coupled to the voice mail database, configured to interface the voice mail database with the media interface; and

an electronic mail notification generator configured to send a rejection notification to a call originator when the call is rejected through the media interface.

Claims 2-7 are cancelled.

8. (Currently Amended) A method comprising:

identifying a media type of a call;

presenting at least one call feature selection associated with the media call type to a subscriber;

determining whether the call feature selection requires additional information;

prompting the subscriber for the additional information when required by the call feature selection;

facilitating audio or video calls through a media interface;

storing a message when the call is unanswered;

sending a rejection notification to a call originator when the call is rejected through the media interface.

Claims 9-10 are cancelled.

11. (Original Claim) The method of claim 10, further comprising:

accepting the additional information from the subscriber.

12. (Original Claim) The method of claim 11, further comprising:

activating the call feature selection.

13. (Original Claim) The method of claim 12, further comprising:

receiving the call;

determining a call originator of the call.

14. (Original Claim) The method of claim 13, further comprising:

searching a caller database for a record matching the call originator, the record containing a picture of the call originator;

displaying the picture of the call originator when the matching record is found.

15. (Original Claim) The method of claim 13, wherein rejecting the call is one of the call features available for selection.

16. (Original Claim) The method of claim 15, further comprising:

sending the call originator a rejection notification when the call is rejected.

17. (Currently Amended) A computer-readable medium encoded with data and instructions, the data and instructions causing an apparatus executing the instructions to:

identifying a media type of a call;

presenting at least one call feature selection associated with the media call type to a subscriber;

determine whether the call feature selection requires additional information;

prompt the subscriber for the additional information when required by the call feature selection;

facilitate audio or video calls through a media interface;

store a message when the call is unanswered;

send a rejection notification to a call originator when the call is rejected through the media interface.

Claim 18 is cancelled.

19. (Currently Amended) The computer-readable medium of claim 18 further encoded with data and instructions, ~~comprising~~ causing an apparatus executing the instructions to:

accepting the call feature selection from the subscriber.

20. (Currently Amended) The computer-readable medium of claim 19, further encoded with data and instructions, ~~comprising~~ causing an apparatus executing the instructions to:

accepting the additional information from the subscriber.

21. (Currently Amended) The computer-readable medium of claim 20, further encoded with data and instructions, ~~comprising~~ causing an apparatus executing the instructions to:

activating the call feature selection.

22. (Currently Amended) The computer-readable medium of claim 21, further encoded with data and instructions, ~~comprising~~ causing an apparatus executing the instructions to:

~~receiving~~ receive the call;

~~determining~~ determine a call originator of the call.

23. (Currently Amended) The computer-readable medium of claim 22, further encoded with data and instructions, ~~comprising~~ causing an apparatus executing the instructions to:

searching a caller database for a record matching the call originator, the record containing a picture of the call originator;

displaying the picture of the call originator when the matching record is found.

24. (Currently Amended) The computer-readable medium of claim 22, wherein rejecting the call is one of the call features available for selection.

25. (Currently Amended) The computer-readable medium of claim 24, further encoded with data and instructions, comprising:

sending the call originator a rejection notification when the call is rejected.

26. (Currently Amended) An apparatus comprising:

means for identifying a media type of a call;

means for presenting at least one call feature selection associated with the media call type to a subscriber;

means for determining whether the call feature selection requires additional information;

means for prompting the subscriber for the additional information when required by the call feature selection;

means for facilitating audio or video calls through the media interface;

means for facilitating calls to multiple parties;

means for storing call messages;

means for interfacing the voice mail database with the media interface; and

means for sending a rejection notification to a call originator when the call is rejected through the media interface.

Claim 27 is cancelled.

28. (Original Claim) The apparatus of claim 27, further comprising:

means for accepting the call feature selection from the subscriber.

Please add the following new claims:

29. The apparatus of claim 1, wherein the media interface is further configured to accept the additional information from the subscriber.

30. The apparatus of claim 29, wherein the media interface is further configured to activate the call feature selection.

31. The apparatus of claim 30, wherein the call handler is further configured to receive the call and determine a call originator of the call.

32. The apparatus of claim 31, wherein the media interface is further configured to searching a caller database for a record matching the call originator, the record containing a picture of the call originator, and display the picture of the call originator when the matching record is found.

33. The apparatus of claim 32, wherein rejecting the call is one of the call features available for selection.
